- myAccount.test.ts file contains a test without any validation and with an incomprehensible comment.
- The users.json file contains a fixed list of login and password options. For incorrect ones, you could generate them and try testing different options.
- Repo has many redundant files that will created by framework or reporter (commands.js, docs folder)
- Both double and single quotes are used at the same time:

```
beforeEach(() => {
    cy.visit('https://google.com');
    //loginPage.launchApplication()
})
it('Sample Test', () => {
    console.log("This is a sample test")
})
```

- Page files names must be capitalized.

```
v  pages
     loginPage.ts
     myAccountPage.ts
```

- --- можливо, перевірки не в фалі тесту, а в файлі пейджі. І тести викликають функції, яких не існує.
- Do not updating base.url in config file.
- Working comments not removed (config.config.ts):

```
// We've imported your old cypress plugins here.

// You may want to clean this up later by importing these.
```

- The test data is specified directly in the test code:

```
it('login with valid credentials', function () {
    loginPage.login("testautomation@cypresstest.com", "Test@1234")
    myAccountPage.validateSuccessfulLogin()
    myAccountPage.logout()
    myAccountPage.validateSuccessfulLogout()
```

```
})
```

- myAccount.test.ts - Summary (Title) of the Bug Report Is Not Descriptive
- Strange title in the readme file: This Framework contains sample code for # Cypress-e2e-Allure Automation-Framework (~~Framework~~ -> Repositorie)
- The Directory Structure in the readme file contains a screenshot where the .github folder is missing, which is actually present in the project.
- The report view in the readme file contains a screenshot of the result of some past check, which quickly becomes irrelevant. There should be a link instead.
- ReadMe must have next sections: summary of repo, requirements, steps to install, steps to launch, steps to creating the report. In fact, some of it is missing.
- cyAllureRun.yml
  - Use ${{ secrets.ACCESS_TOKEN }} instead of ${{'secrets.ACCESS_TOKEN'}}.
  - Update JamesIves/github-pages-deploy-action to version v4.
  - Prefer lowercase job names (e.g., run-tests).
-
